Feedback on Feedback on course Math 20222

I read carefully students remarks on the course and I will do my best to use the constructive part of these remarks of the students to make better the lecture work and especially work on tutorials. Sure it is very important student’s opinion about the mode of tutorials, especially about questions that students have opposite opinion about: such as active working at blackboard and collective mode of solving problems, etc. This year I tried and next year will continue to organise the working process in the way that both parties (having opposite opinions) would be more satisfied. There is sure a special problem with English. I always try my best to do it better, but still there are some comments which show that the work have to be continued.
