The downside with detailed online notes - which were appreciated - is that the lecture loses spontaneity. Nevertheless I try to provide insights and explanations during the lecture. The podcasts and example sheets and solutions online were also appreciated. I will seek to improve the consistency of notation throughout the course.

I accept that working through more examples using a whiteboard or visualiser can increase spontaneity. However, I feel that pivoting rows of matrices on a whiteboard is an ineffective use of lecture time. I will seek to trim the notes in order to reduce repetition and this will allow me to enliven the material by going through past exam questions.

It was disappointing that not more students positively engaged with the topic and attended the scheduled tutorial (support) classes. These classes provide an important means of reinforcing the learning of lecture material, an opportunity for clarifying concepts and for detailed explanations.
