After looking at the student responses for the specific questions I found out that about 50% of those who filled the questionnaire enter 4 or 5 on Questions 1, 4, 5 and 7, and about 47% give 4 or 5 on Questions 3 and 6. However, I just get 29% of 4 and 5 answers on Question 2 (feedback). I will certainly try to improve on this part next time I teach this course.

More importantly, I should also say that third year students do find this course hard going and I don't know what to do about it. A few years ago it was decided that a 4th year course which attracts less than 15 students should either discontinue or be offered to 3rd years students. Nowadays we have more 4th year, MSc and PhD students than we used to. So I wonder if we could rebrand "Lie Algebras" as a 4th year course with an option for 3rd year students. This would enable me to get deeper into the subject which could be appreciated by all PhD and some MSc students.
