In Section A, question A3 presented a tough challenge. Most students got confused since the argument was non-linear. The rest of the section went reasonably well.

B8: parts (b) and (c) were a slight variation of the bookwork example, which created an issue for most students.

B9: part (c) was unseen and proved tough.

B10: fine

B11: most of this question was unseen, however most students did well.

C12 (4/61002 only):

(a), (b) and (c) were bookwork and went reasonably well

(d) and (e) less so, but it was really surprising that (f) didn't go well at all. No-one managed to solve (g), unfortunately.
